Compañía Europea de Cospeles S.A., better known in the blanking market as CECO, S.A., was founded in 1999, as a joint venture between the Fábrica Nacional de Moneda y Timbre-Real Casa de la Moneda Española (FNMT-RCM) together with the German company Deutsche Nickel, with the main objective of manufacturing blanks during the introduction of the Euro in Spain in 2002.
Our mission is to actively help our customers thrive using innovative organizational techniques and advanced information and manufacturing technologies.

The fundamental objectives of our information security management system are:

- Protect information assets according to their value or importance.
- Ensure the confidentiality, availability, and integrity of information.
- Manage identified risks diligently.
- Preserve the privacy of customers, employees, suppliers and third parties.
- To ensure compliance with applicable requirements, and especially legal requirements.
- Continuously improve the information security system.

To achieve these general objectives, the Management of this company assumes the firm commitment to optimize its information security policy based on the following factors:

- Legal Requirements: Understand the legal requirements and other types of requirements specified by our clients as a set of minimums to be met.
- Dissemination: Disseminate and promote the improvement of information security.
- Stakeholders: Joint participation with all our STAKEHOLDERS for an improvement in information security.
- Training: Constant training of all our professionals, in technical knowledge, and skills, encouraging their participation and commitment to this policy, the improvement of the system and information security.
- Monitoring: Establish indicators at all levels that allow us to make evidence-based decisions.
- Continuous improvement: Establish and periodically review objectives and goals, which provide a framework for continuous improvement of processes and sustainable development.
- Analyze: Analyze and evaluate any deviations that may occur in terms of information security and establish the necessary corrective actions and opportunities for improvement.
- Integrated system: Participatory development of all groups in the organization, at all levels, being aware of the contribution to the objectives of the system and the repercussions of non-compliance.

The Management
